

## Algo

1. Create Project "Validation of User Login"
2. Create index.html and srtyle.css file in web content.
3. Create LoginServlet.java and DashboardServlet.java file
4. In index.html , get username and password from user and send to "LoginServlet"
5. In "LoginServlet: check the credentials . If credentials are correct, then send to "DashboardServlet"
6. Else Display meassage "Incorrect Credentilas:"
